1 Appendix A: Main Analyses, Data, and Coding

1.1 Surveys Used in Analysis

This article compiles a number of political polls and surveys for analysis. Political polls were found and downloaded from the iPoll database available through the Roper Center for Public Opinion Research. Other surveys used came from the Cooperative Congressional Election Study (CCES). In this section of the Appendix, a list of all surveys and variations of questions used in the analyses can be found.¹

¹Sample size indicates respondents covered by our analysis (i.e. black and white respondents). Symbols indicate coding notes, which are explained in the “Demographic Coding” section below.

Casualties:

1.2 Demographic Coding

In order to control for a number of demographic characteristics – especially in sections of this article where we draw from a number of different polls – we created a simplified, factor-based coding scheme for our race, gender, education, party ID, age, and income variables. The cutoffs for the variables are as follows:

- *Race*: black/white
- *Gender*: male/female
- *Education*: high school degree or less, some college, college degree, post-graduate work or degree
- *Party ID*: Republican/Independent/Democrat
- *Age*: 18-29, 30-49, 50-64, 65+
- *Income*: less than \$30,000, \$30,000 to \$50,000, \$50,000 to \$75,000, \$75,000 and above

There were some coding issues to reconcile during our process. Some datasets did not include an income variable – thus, we replicate analyses without the use of this control variable in the robustness checks below.² In datasets where there was an option for Party ID other than Republican, Independent, or Democrat (i.e., “other” or “no party”) those who chose this option were coded as Independents.³ In surveys where there was a “mixed” option for race, those who selected it were considered “other,” and thus would not appear in the black-white coding scheme. (Surveys generally did not include information for mixed race respondents on which races they belonged to or how they chose to identify.)⁴ While many surveys used a cutoff of \$30,000 for income, some

²Datasets lacking an income variable are denoted in Tables A1 - A3 with a *.

³Datasets in which options other than Republican, Democrat, or Independent were coded as “Independent” are denoted in Tables A1 - A3 with a †.

⁴Datasets in which “mixed” was considered “other” are denoted in Tables A1 - A3 with a ‡.

used a cutoff of \$35,000. Similarly, some surveys used a high-end cutoff of \$70,000 instead of \$75,000. For this reason, the “under \$30,000” or “over \$75,000” categories in the regressions are sometimes inaccurate by \$5,000 or less.⁵ In a small number of surveys, responses that the survey taker had a certification from a technical school or an associate degree were coded as having “some college” instead of having a “college degree.”⁶ Across a number of ABC casualties surveys, the middle age cutoff is at 44/45 instead of 49/50, while the older age cutoff is at 61+ instead of 65+, and as a result, the cutoff in the regression is +/- 5 years for these surveys.⁷ In another small group of surveys, the cutoff for middle age was 54/55 instead of 49/50, and as a result, the cutoff in the regression is +/- 5 years for these surveys.⁸ There were a few more one-off discrepancies in the data, which are denoted in Tables **A1 - A3** with an ^a.⁹

1.3 Questions Used in Analysis

The following section lists variations in questions used for our analyses.

1.3.1 Outcome Questions

We use a number of different outcome questions to measure support for the wars in Iraq and Afghanistan. In each case, a 0 indicates a lack of support (i.e., do not favor, war was a mistake, war was not worth fighting), and a 1 indicates support (i.e., favor, war was not a mistake, war was worth fighting).

⁵Surveys in which the cutoff for income was \$35,000 instead of \$30,000 are denoted in Tables **A1 - A3** by a [⊖]. Surveys in which the cutoff for income was \$70,000 instead of \$75,000 are denoted by a [§].

⁶Surveys in which technical school or associate degrees are coded as “some college” are denoted in Tables **A1 - A3** by a [□].

⁷The surveys with slightly different middle and old age categories are denoted in Tables **A1 - A3** by a [⊕].

⁸The surveys in which the middle age cutoff is 54/55 instead of 49/50 are denoted in Tables **A1 - A3** by a [⊔].

⁹The March 2002, July 2003, and September 2003 ABC casualties polls, as well as the January 2002 ABC survey used in the Iraq alienation section, included no option for “Asian” as a race, and thus, Asian respondents were included in the “other” category. Given that Asian responses were not included in this analysis, this coding choice is not relevant to the study at hand. The January 2003 survey by CBS featured in the Iraq alienation data used a \$25,000 income cutoff instead of \$30,000. The January 2003 survey by CBS/New York Times in the Iraq alienation dataset had a discrepancy in its high-end cutoff for income in its questionnaire as compared to in its survey question: the SPSS dataset says \$70,000, but the survey questionnaire says \$75,000.

- *Iraq:*

- Do you favor or oppose the U.S. war in/with Iraq?
- Looking back, do you think the United States did the right thing in taking military action against Iraq, or should the U.S. have stayed out?
- In view of the developments since we first sent our troops to Iraq, do you think the United States made a mistake in sending troops to Iraq, or not?
- Which comes closest to your opinion on U.S. decisions regarding Iraq (“Support” = agree with):
 - * The U.S. was right in going to war in Iraq, but mistakes made following the invasion have made the results too costly in American lives and money to be worth it.
 - * The U.S. was right in going to war in Iraq, and despite mistakes made following the invasion, the results have been worth the cost in American lives and money.
 - * The U.S. was right in going to war in Iraq and made no serious mistakes following the invasion; the difficulties the U.S. has faced were unavoidable, and the war’s results have been worth the cost in American lives and money.
- All in all, do you think it was worth going to war in Iraq, or not?
- All in all, do you think the situation in Iraq was worth going to war over, or not?
- Do you approve or disapprove of the United States taking military action against Iraq to try to remove Saddam Hussein from power?
- Would you favor or oppose invading Iraq with U.S. ground troops in an attempt to remove Saddam Hussein [Suh-DAHM WHO-sane] from power?
- From what you know now, do you think the United States did the right thing in taking military action against Iraq last year, or not?

- Do you think the United States was right or wrong in going to war with Iraq?
- On another subject, all in all, considering the costs to the United States versus the benefits to the United States, do you think the war in Iraq was worth fighting, or not?
- All in all, considering the costs to the United States versus the benefits to the United States, do you think the war with Iraq was worth fighting, or not?
- Considering everything, do you think the United States did the right thing in going to war with Iraq, or do you think it was a mistake?
- Would you favor or oppose having U.S. forces take military action against Iraq to force Saddam Hussein from power?
- All things considered, do you think it was a mistake to invade Iraq?
- Do you think it was a mistake to invade Iraq?

- *Afghanistan:*

- Do you support or oppose the U.S. military action in Afghanistan?
- Do you favor or oppose the war in Afghanistan?
- In view of the developments since we first sent our troops to Afghanistan, do you think the United States made a mistake in sending troops to Afghanistan, or not?
- On another subject, all in all, considering the costs to the United States versus the benefits to the United States, do you think the war in Afghanistan was/has been worth fighting, or not?
- Do you think the U.S. is doing the right thing by fighting the war in Afghanistan now, or should the U.S. not be involved in Afghanistan now?
- Do you favor or oppose the United States taking direct military action in Afghanistan?
- Do you favor or oppose the United States taking direct military action using ground troops in Afghanistan?

- Do you approve or disapprove of the military attacks led by the United States against targets in Afghanistan?
- All things considered, do you think it was a mistake to invade Afghanistan?

1.3.2 Casualty Questions

- Do you think the United States should keep its military forces in Iraq until civil order is restored there, even if that means continued U.S. military casualties?
- Do you think the United States is doing all it reasonably can do to try to avoid U.S. military casualties in Afghanistan, or do you think the United States should be doing more to avoid U.S. military casualties?

1.3.3 Alienation Questions

Questions used to measure political alienation included the following (coded 0 if the respondent thought that the president cared/understood and 1 if the respondent thought that they didn't):

- Bush/Obama cares about the needs and problems of people like yourself
- Bush/Obama cares about people like you
- Bush/Obama cares about the needs of people like you
- Bush/Obama generally agrees with you on issues you care about
- Bush/Obama is someone who: a) cares about people like me or b) someone who DOESN'T care about people like me
- Bush/Obama understands the needs of people like you
- Bush/Obama understands the problems of people like you

- Bush/Obama understands the needs and problems of people like yourself

1.4 Main Analyses - Regression Tables

The regression tables for the analysis of the race gap in support for war, as well as for the analyses of explanatory variables discussed in the paper (casualties, family member in the military, domestic spending, and alienation), can be found in this section. Running bivariate versions of our regressions and mediations yields largely the same results. Bivariate results are included in the “race gap” table in this section; and for all explanatory variables, bivariate regression results may be found in the Appendix B, section 2.1 in the supplementary files.¹⁰

¹⁰As would be expected, the magnitude of effects of the explanatory variables on support for war are larger in bivariate regressions without controls. The only difference worth noting is that in bivariate analyses, the domestic spending regression results during the Obama administration look much more similar to the results during the Bush administration, with a positive coefficient on “Black” in the simplified version of Table A6 Model 4 (see Table B2 Model 4). The bivariate mediation analyses for spending during the two administrations are very similar, as well. All bivariate regression results can be seen in Tables B1 - B3 in Appendix B of the supplementary files; bivariate mediation results can be seen in Figures B1 - B3.

1.5 Main Analyses - Figures

This section includes mediation figures for the explanatory variables discussed in the paper (casualties, family member in the military, domestic spending, and alienation). It also includes a coefficient plot for the “military family” variable.

Casualty Sensitivity (Bush)

Military Family (Bush)

Military Family (Obama)

Figure A1: Mediation effects plots, casualty sensitivity and military family status.

Figure A2: Coefficient plot, race and military family status.

Figure A3: Mediation effects plots, spending preferences.

Alienation (Bush)

Alienation (Obama)

Figure A4: Mediation effects plots, political alienation.

1.6 Summary Statistics

Table A8: Summary statistics, surveys related to casualty sensitivity (Iraq War).

Variable	Mean	Sd	Min	Max

2 Appendix B: Robustness Checks

This section features a number of robustness checks meant to provide added insight into the results presented in the article.

2.1 Bivariate Regressions

Here we conduct robustness checks for regressions involving each of our proposed explanations without control variables (only race and poll fixed effects).

Table B1: Casualty sensitivity, military household status, and support for the Iraq War, 2003-2014 (bivariate).

Outcome:	Support Iraq War			Military Family			Support Iraq War			Military Family

2.3 Alternative Casualty Question

Here, we present the results of an alternate coding of the casualty sensitivity question, which asks: “Thinking about the goals versus the costs of the war, so far in your opinion has there been an acceptable or unacceptable number of U.S. military casualties in Iraq?”

Table B6: Casualty sensitivity and support for the Iraq War, 2003-2005 (alternative question).

Sample	<i>Dependent variable:</i>		
	Casualty Sensitivity (alt.)	Support War

Casualties Alt. (Bush)

Figure B6: Mediation effects plot, casualty sensitivity (alternative question).

3 Appendix C: Democrats-Only Analysis

Given that the vast majority of black American voters are Democrats, and that partisanship accounts for much of the black-white between-group variation in support for war, we re-run our analyses subsetting to only the self-identified Democrats in our samples. We observe a substantive race gap in support for war among Democrats during the Bush years but not during the Obama years.

Figure C1: Coefficient plot, race and support for the Iraq War (Democrats only).

Table C1: Race and support for the Iraq War, 2002-2014 (Democrats only).

	Bush (Casualties)		Bush (Alienation)		Obama (Alienation)		Bush (CCES)		Obama (CCES)

4 Appendix D: The War in Afghanistan

We extend our analysis to public opinion regarding the war in Afghanistan. We include these analyses, which show largely the same results as the main article, to expand the scope of the present study beyond views on the Iraq War and consider another recent war. Note that there are no CCES surveys during the Bush administration that ask about support for the war in Afghanistan.

4.1 Race Gap in Support for Afghanistan War (Full & Democrats-Only Samples)

Figure D1: Coefficient plot, race and support for the Afghanistan War.

Table D1: Race and support for the Afghanistan War, 2002-2014.
